

NITTANY ENGINEERING & ASSOCIATES, LLC

Land Development

St. Joseph Institute –
Port Matilda, PA

What Can We Do For You?

Nittany Engineering & Associates, LLC (NEA) is a consulting engineering firm with offices in Centre Hall, PA and Bridgeville, PA. For the past two decades we have selected the most appropriate technologies to meet our customer's goals. We understand the competitive environment of industry and the budget constraints of our clients. In order to meet our customer's goals, we commit appropriate resources to every project and have created an efficient yet flexible company structure that allows us to operate with low overhead. After the strategic goals for a project are determined, our team of experienced professionals attacks those objectives by combining traditional design experience with the latest state-of-the-art technology.

We have the capability of supplying full engineering services on all of our projects. This includes the initial surveying, drafting, designing and specifications development. As the design progresses, we obtain permits required at the federal, state, and local levels. Once the project is under construction, we provide construction stakeout, construction inspection services to ensure that the project is completed according to the design, and construction management. After construction is complete, we provide technical support for proper operation of the project. We provide a complete service from concept through construction and to final operation.
